

Please print this one page and add it to your manual.

When you set up a product, automatically a Qty (quantity) attribute is added to the Checkout Form (see diagram below). This allows the customer to buy multiple volumes of a product, automatically the Total is calculated by the quantity multiplied by the price and a new Total is displayed.

You can add more Attributes for your customer to select from. eg. Size, Colour, etc.

An Attribute option will offer a drop down menu they can select from. The option will be displayed on the order.

The freight weight is also calculated with the Qty attributes, the qty is multiplied by the product weight offering a total weight. (Sample : 2 qty x 300gr = 600gr)

The Attributes feature was added to the Products form.

You can add up to 10 Attributes to a product.
